

## **Greenergy promotes sustainable tourism and electrification with the installation of free electric chargers on the Carretera Austral**

- *The GrenRiders Austral 24 initiative will help tourists and citizens travel 1,000 kilometers of the Austral route in a sustainable and efficient way*
- *The project includes various donations for education and training projects in local communities*

Madrid, March 20, 2024. Greenergy has launched the *GrenRiders Austral 24* initiative with the aim of promoting sustainable tourism and electrification along the Carretera Austral (Chile) through the installation of free public charging points for electric vehicles.

On the route, divided into five stages, Greenergy has inaugurated three free public electric charging stations that will allow tourists and citizens to travel 1,000 kilometres of the route in a sustainable and efficient way both by electric vehicle and electric bicycle.

To kick off this initiative, a group of company executives led by David Ruiz de Andrés, CEO of Greenergy, travelled 1,000 kilometres of the route on electric bicycles, accompanied by electric support vans, paying maximum attention to leaving 0 emissions.

"This expedition proves that even one of the world's southernmost and most remote routes can be traversed entirely with clean energy. In order to make this possible, we wanted to promote its electrification through the donation of chargers for electric vehicles and, in this way, promote sustainable tourism on one of the most amazing routes in the world," said David Ruiz de Andrés, CEO of Greenergy.

### **Donations for Education Projects**

Within the framework of *GrenRiders Austral 24*, Greenergy has also made donations to the local communities near the Carretera Austral for training projects linked to the field of energy and sustainability with the aim of contributing to the economic and social development of the localities, while caring for and maintaining the biodiversity of the environment.

The different social actions agreed will benefit 600 people from the different local communities, including training activities such as scholarships and agreements to promote specialized workshops in ecology and recycling and promote ecological awareness.

"Our commitment to Chile is solid, not only with the growth of our business but also with the development of communities and biodiversity in the regions where we are present. Our goal is to continue growing in Chile, while promoting the energy transition and improving the quality of life of communities," said David Ruiz de Andrés.

#### About Greenergy Renewables:

Greenergy Renovables is a Spanish company created in 2007, an independent producer of energy from renewable sources, mainly photovoltaic and storage, listed on the Spanish stock exchange since 2015. Its business model covers all project phases, from development, through construction and financial structuring to plant operation and maintenance. The company has a global platform of more than 15 GW of solar in various stages of development in the eleven countries where it operates in the European (Spain, Italy, Germany, Poland and the United Kingdom), North American (United States) and Latin American (Chile, Peru, Mexico and Colombia) markets.
