

MSCI once again ranks Greenergy among the world's most sustainable energy companies

Greenergy earns MSCI's highest ESG rating, AAA, for the fourth consecutive year, with an improved score of 9.7 out of 10.

Madrid, 9 September 2026. Greenergy has once again achieved MSCI's highest AAA ESG rating, a widely used reference in international financial markets for integrating sustainability considerations into investment decisions. The company has improved its score to 9.7 out of 10, consolidating its position among the world's most sustainable utilities.

This marks the fourth consecutive year that MSCI has awarded Greenergy its highest AAA rating, following a peer-based assessment that evaluates how companies manage the key ESG risks and opportunities relevant to their sector.

In this year's assessment, Greenergy's improved score reflects, in particular, progress in its environmental performance and recognition of the company's ability to capture business opportunities associated with renewable energy.

In this context, Greenergy continues to develop hybrid solar generation and energy storage platforms in new geographies, replicating a model that originated in Chile with Oasis de Atacama and has since expanded into other markets, including Europe through Iberian Oasis.

At the same time, the company is developing Greenbox, its stand-alone energy storage platform in Europe, further strengthening its commitment to flexible and innovative energy solutions. These initiatives are supported by innovative financing structures and long-term power purchase agreements (PPAs), key tools to drive growth, strengthen investment capacity and accelerate the energy transition.

The improved MSCI score also recognises Greenergy's progress in other key areas, including corporate governance, with improved recognition of the company's ability to manage governance-related risks and the strength of its practices in this area. In this regard, Greenergy established a dedicated Sustainability Committee this year to strengthen Board-level oversight of ESG matters and further integrate them into corporate strategy.

With this rating, Greenergy maintains and reinforces its position among the highest-rated companies in its sector for sustainability, reflecting a robust ESG strategy recognised by leading international rating agencies.

For María Rodríguez, Sustainability Director at Greenergy, "Receiving MSCI's highest AAA ESG rating for the fourth consecutive year recognises the strength and consistency of our sustainability strategy. Looking ahead, we are focused on delivering measurable positive impact and long-term value for our local communities and the environment".

About Greenergy

Greenergy is a Spanish multinational clean energy company. Founded in 2007, it has been listed on the Spanish stock exchange since 2015 and currently has a market capitalization of more than €2.5 billion. The Company develops, builds and operates utility-scale solar PV projects and is a pioneer in battery energy storage.

With a team of more than 600 professionals, Greenergy operates across three key regions: Europe (Spain, Italy, Germany, Poland, Romania and the UK), North America (the US) and Latin America (Chile, Peru, Mexico and Colombia). Its global portfolio comprises 71 GWh of energy storage capacity and 12 GW of solar capacity at various stages of development.

By integrating battery storage with solar generation, Greenergy delivers clean, affordable, reliable and around-the-clock renewable energy—where it's needed, when it's need.
